

6.12 Actions

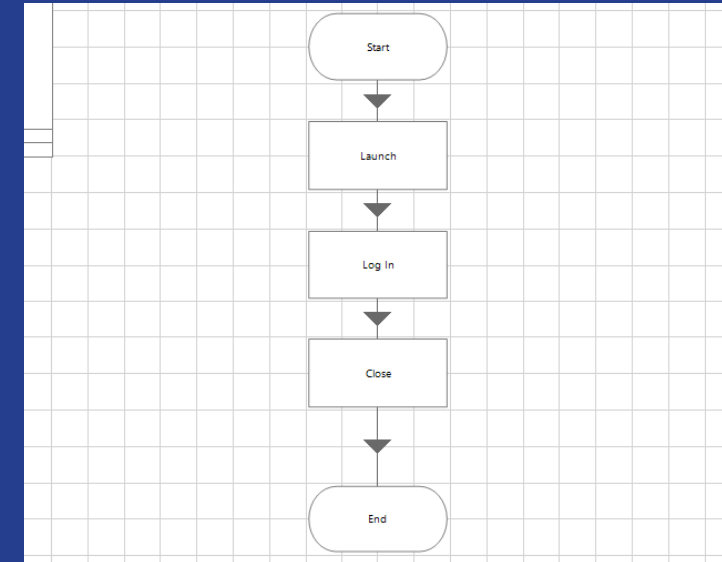

Actions

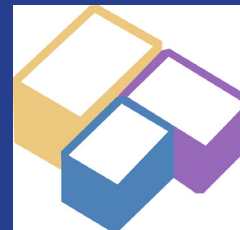

- The functionality of Actions can only be utilized once the Business Object has been set up to interact with a Process. Which can be achieved via the inclusion of Action Stages within the Process Diagram.
- Action Pages need to be published before they become visible within the Action Stage properties menu.
- Once an Action has been published, the Action icon will be visible next to the tab containing the Business Object Action name.

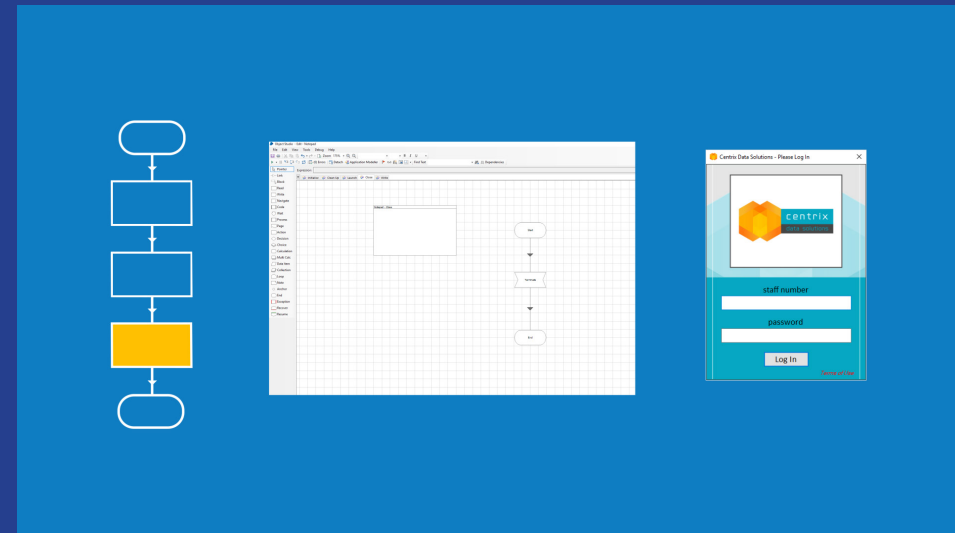

Action Stage properties window assigning an Action.
