

# 8.3 Exception Bubbling

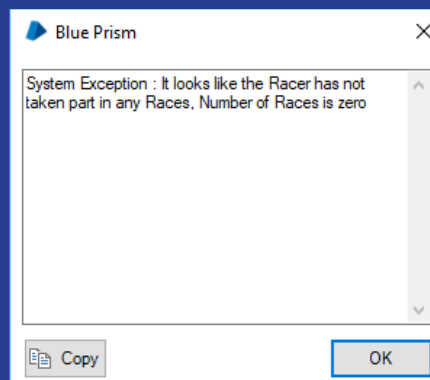

## Exception Bubbling

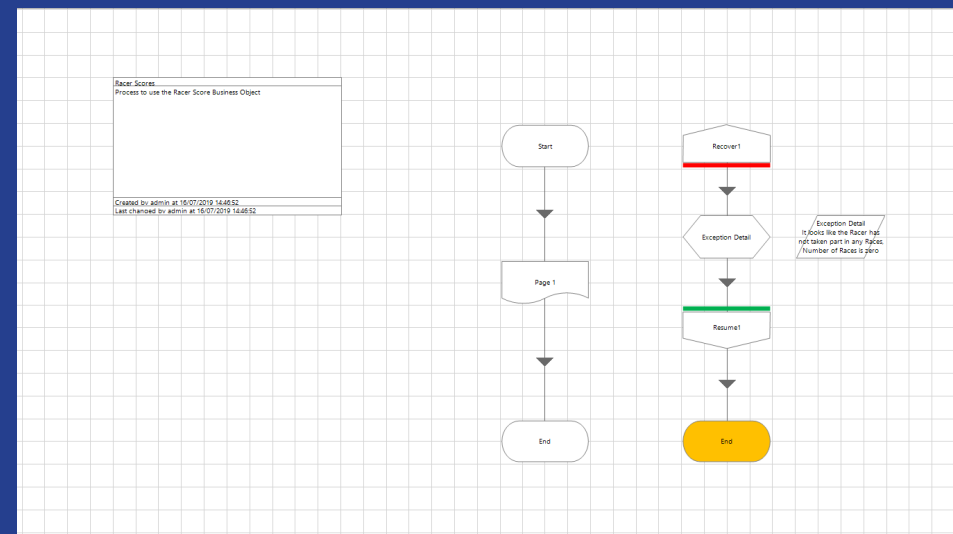

- Exceptions can occur at any point throughout a Process Solution, wherever an Exception occurs, it will always move up towards the Main Page of the Process to the highest layer of the Process Solution.
- An Exception will continue to Bubble up from an Action in a Business Object and then through the hierarchy of the Pages within the calling Process, until it reaches a Page that contains Recovery logic. At which point the Exception will be handled.
- If the Main Page of the highest layer of the Process Solution does not contain logic to handle the error, then an error message window will appear when running in Process Studio. If the same occurs when running a Process in Control Room, the Process will Terminate.

Exception Bubbling up from Object Diagram to Main Page in Process Diagram.

Error message window.
