

Blue Prism Tools (section 6)

Stage Tools

Action

An Action Stage enables the Actions within a Business Object to be utilized by a Process.

Read

A Read Stage is used to read information from an application and store it within a Data Item.

Write

A Write Stage is used to transmit values from a Blue Prism Process to an external application.

Navigate

A Navigate Stage enables Actions to be used to Launch and Close an application.

Exception

An Exception Stage provides a Process or a Business Object with the ability to capture and handle errors.

Wait

A Wait Stage enables Business Objects to wait for an application to load or a condition to be met, before continuing.
