

# Blue Prism Tools (Section 3)

## Stage Tools

Collection

A Collection Stage can store multiple values that can be used by a Process.

Page

A Page Reference Stage enables movement between the Pages within a Process.

Loop

A Loop Stage can work through the data stored within a Collection Stage.

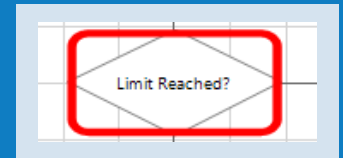

Anchor

An Anchor Stage enables a Process Diagram to link around corners.

## Controlling Play

- As a Process Diagram grows, so will the need to run and test what has been built.
- To check whether a Process flows as expected through a specific part of a Process Diagram, or to replay part of a Process Diagram, it is possible to skip straight to the relevant Stage and run from there. This capability is called 'Set Next Stage'.
- A Process can be set to pause on a specific Stage when run - these are called Breakpoints. Breakpoints are only used for testing purposes.

Play/Resume

The Play button allows the user to start or to resume the running of a Process.

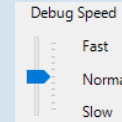

Pause

The Pause button allows the user to pause a running a Process.

Step

The Step button enables the user to step through a Process one Stage at a time.

Speed Slider

The drop-down slider allows the user to control the running speed of a Process.
