

9.1 Working Items

Working Items

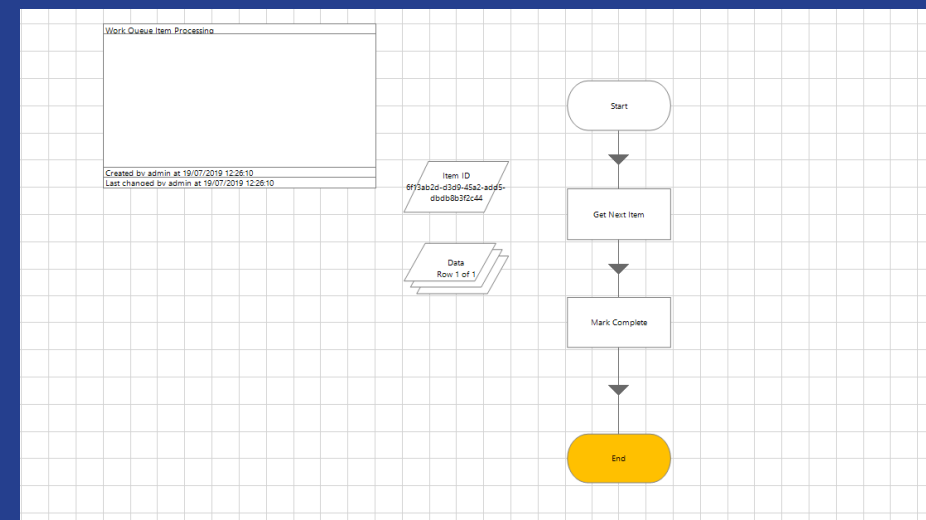

- Blue Prism comes with some Business Objects, that are pre-installed within the software. These 'Internal Business Objects' are not diagrams and cannot be viewed or changed - only used in the Process through an Action Stage.
- An example of this is the *Internal Business Object - Work Queues Business Object* - which serves to provide a connection between a Process and a Work Queue. Enabling the Process to store data extracted from external sources within a Work Queue, to be managed and worked within Blue Prism.
- From within Control Room, Work Queues use different icons to communicate the state of each Item within the Queue:
 - An unworked or 'Pending' item is marked with three blue dots.
 - An Item that is currently being worked by a Process is marked with a padlock.
 - An Item that has been worked and completed successfully, is marked with a green check.
 - An Item that has encountered an error is an Exception and is marked with a purple flag.

Work Queue status key.
