# 6.14 Multiple Business Objects
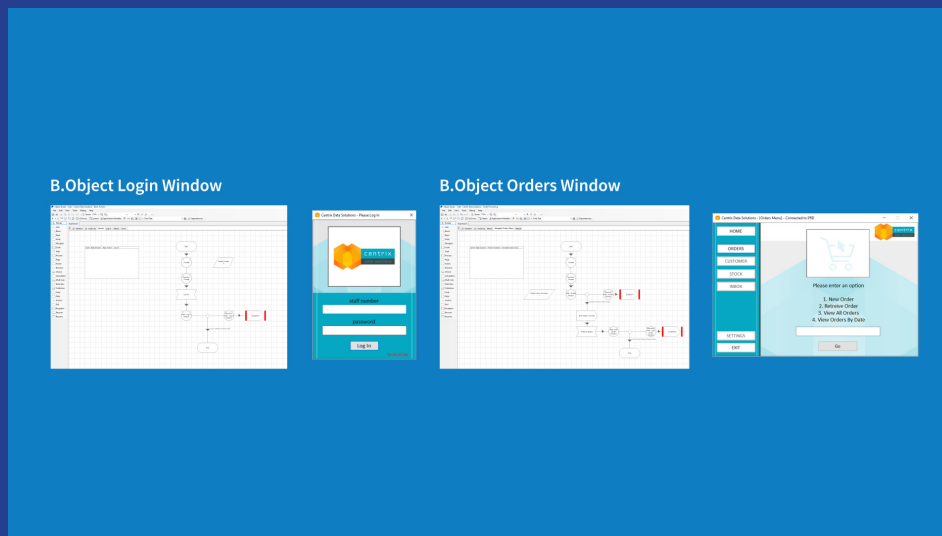

Multiple Business Objects
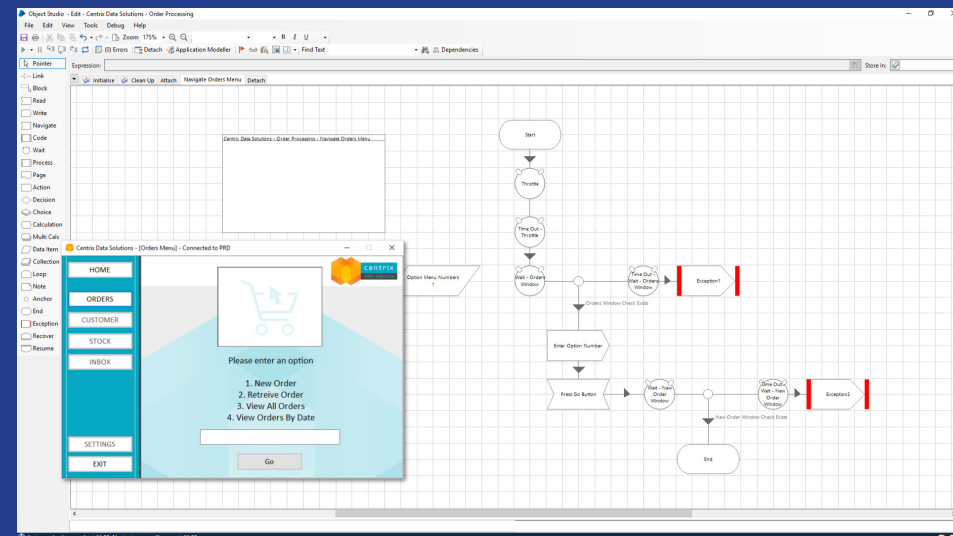

- **Business Objects should be kept small and simple and be designed to perform a specific function or a small group of similar functions.**

- **It is therefore best practice, to build a separate Business Object for each window within an application – this approach is known as 'Multiple Business-Objects' and makes Business Objects much easier to manage and maintain, especially in a shared work environment.**

- **Smaller Business Objects also require less memory, resulting in better performance.**

Business Object for *Log In* window of application.

B.Object Login Window

B.Object Orders Window

Dedicated Business Object for each window of the application.

Business Object for *Orders Menu* window of the application.
